

OX COIN TOKEN

ECOSYSTEM

MOO PAPER
(WHITE PAPER)

INTRODUCTION

This is our first community cryptocurrency. We have added casting and destruction methods to the ETH smart contract. This is a new model, which can make online payment and shopping on our official website and partner platform. At the same time, you can invest, buy and earn income. Of course, investment and financing are often accompanied by risks, so we should treat them rationally. The new model means that tokens will appear on the market in the form of digital stocks. Even in the final liquidation, we will buy back your token at 50% of the real-time price. Of course, this is not the result we want. Our initial supply is 10 billion pieces. We set a transaction fee of 0.6% for each transaction, which may rise or fall in practice. Every time we adjust the service charge, we will inform the market 6 months in advance. Please pay attention to the real-time news of our official website. For the use of handling charges, we will use 40% as public welfare donation, 30% as commercial investment, and the rest as operation and promotion expenses. We can increase the supply of tokens. We usually inform you one year in advance. Why do we use cattle as a symbol? Here we use some Chinese words for reference, because they are honest, hardworking, reliable and trustworthy. Let's see it grow.

BACKGROUND

1. For What

Since 2014, many digital currencies have been launched in the market. We find that most digital currencies in the market only stay in the investment attribute, which is contrary to the original intention of decentralized finance. Most of the digital currency holders in the world hope that their currency can circulate, so that they can resist the inflation of global fiat money and better protect their assets without considering the complicated exchange settlement problem. The token we issued for the first time is defined as a kind of digital bond bill, which can be used as digital currency circulation and has investment properties. We hope that there will be a new financial market environment in the future. We should understand that the price rise caused by the arbitrary issuance of legal tender in the world is not a problem that everyone can solve. So we choose to issue token, we call it "the next generation of financial innovation"! If you want to fight inflation, if you want to simplify the settlement of foreign exchange, if you want to earn investment income, please choose OXC. As a new financial community, we have these major businesses. We find that in the process of the development of the real economy, many high-quality individuals, enterprises or groups need funds to solve their business difficulties. At the same time, there are also some poor and vulnerable groups that need your help. Therefore, we decided to use 30% of the handling charge for regular public donations. Among them, 40% of the handling fee is for business investment or angel investment, which will support more people to realize their ideals. At the same time, we will also agree that the investee needs to buy back the OXC token in the market within the specified time given by us, so as to stabilize our joint establishment of the financial market. The remaining fees are mainly used for operation promotion, server broadband, and supporting the salary and welfare of operators. We hope that it will be better.

2. Team Information

Harry Wells project sponsor is mainly responsible for community operation promotion and commercial investment operation. It has more than ten years of social work experience, and providing financial reform is the trend of the future. He has rich theory and practical concept of business investment, and has a great research spirit on business model in science and technology, biology and other fields.

Wayne Fay is CTO of our community, mainly responsible for technical maintenance and website construction, and has more than ten years of development experience, and he has been the most powerful technical support for us.

3. Confidence

“ We are in the forefront, and at the same time, we will accept everyone's urging, because this will usher in unprecedented changes, "the next generation of financial innovation!" ”

By Harry Wells

LIQUIDITY

1. Mint & Burn

First of all, we have opened up the feature of destroying tokens to ensure the inflation brought about by the issuance of additional tokens. This feature is mainly used to adjust the overall supply of tokens. After the destruction of tokens, the overall supply will also decrease simultaneously. For the makers who hold large coins, if they can destroy their own tokens, to ensure the stability of the financial market. Because OXC is a new type of digital token, we also have the characteristics of casting token, which is similar to the issue of additional shares by enterprises. We will not issue additional tokens at will, because we need to confirm the overall token.

2. Swap

OXC supports the swap of USDT. Our initial exchange price is 1 USDT = 630,000 OXC. Because the total circulation amount is 10 billion, our initial market value is not high. If it is recognized by the market and everyone, I believe that the market value of OXC will exceed that of amazon in a period of time. We will launch our token on the DeFi app, and then you can trade on it.

3. Add Liquidity

In the first year, we will freeze 50% of the token circulation and put up to 10% of the total amount of tokens into the DeFi exchange. At the same time, we will make real-time adjustments according to the market situation. If we all agree with our business model of "next generation financial innovation", we will gradually open the OXC token trading market. If you have OXC token in your hands, we will recommend that you hold it for a long time, or invest it in the capital pool of the DeFi app to earn income.

OX COIN TOKEN

OXC/USDT

4. Basic Information

OX COIN TOKEN	
Symbol	OXC
Decimal	8
Contract address	0xF130fc93a147bE564a36C810Dad749610EEa6f7A
Block chain	ERC-20
Initial max supply	10,000,000,000
Initial transaction rate	0.6%
Initial supply rate	1 USDT = 630,000 OXC

THE VISION

1. Venture capital

When the OXC token market tends to be stable, we will set up a venture capital fund with 40% commission. We will look for all kinds of excellent resources around the world and invest in them with OXC token. Of course, we will also give a specified period of time to the investment objects of enterprises or individuals, so that they can buy back the OXC tokens held by everyone in the market, so as to make the OXC market more prosperous. We hope to become a rising star and surpass IDG capital. Every investment event of us is reported on the official website or twitter, so that we can rest assured.

2. Charitable fund

This is a cause that we have been striving for. We will use 30% of the handling fee for charitable donation. There are poor and vulnerable groups all over the world. We should spread love and help them. To make the world a better place. We will record every donation event on our official website, so that we can understand what we are doing, pass on our love and let us continue!

3. Acceptance stock

Why is it called "the next generation of financial innovation"? What innovations have we made? This time, we think that the issuing bank's token is a kind of community stock bond, because the ordinary digital currency will become worthless once it faces a crash. And OXC token will not, because we have to make the final guarantee for you. Even if the OXC token is not recognized by the market and is facing liquidation, we will convert a part of the OXC token in your hands according to the final market price, so as not to let his capital go forever. We can give a few examples: BitCoin, DogeCoin and DashCoin. Once they are faced with liquidation, the virtual currency in our hands will become digital for entertainment only. Become worthless.

4. Shopping

At the beginning, we will go on the website or hang out some OXC clothes for you to choose. At the same time, we are also actively preparing theme series products. You can pay attention to our Twitter. If there are new products on line, we will immediately inform you. We will also settle in the third-party e-commerce platform to sell my theme products. We will pay USDT for collection and support OXC token for collection. If you have good ideas, you can contact us by email.

If you like OX culture, you can email me harry@oxctoken.com

CONCLUSION

We are very young, we have ideals, we advocate financial reform and innovation. OXC token will be the next financial transformation. Let's witness it. Any kind of new things, people are always in wait-and-see and dare not try it, which will lead us to miss many opportunities. OXC token is a beautiful thing, but it also has certain risks. We need to inform the market and everyone, because it is a new financial form we have jointly established. We look forward to your participation!

On the issue of transaction fees, we will make corresponding adjustments later. If a commercial project has no operation and promotion funds, it will become a joke.

About the animal used in the logo, why is it a ox? Our answer is: ox's, honest and reliable, work seriously, and not afraid of hard work, hard work, it is in line with our spirit of craftsmanship.

“ Salute all innovators of financial reform! ”
